Amiga

**Imagination
Power
Performance**

Features we build into each of our professional productivity products. From digitizers to disk utilities, we develop solutions which allow you to harness the power of your Amiga.

Progressive is dedicated to expanding the availability of creative Amiga applications for business, video production, graphics and information management.

This quick reference guide will afford you the information necessary to purchase the right product, the first time!

Only Amiga makes it possible.

Progressive makes it professional!

Progressive Peripherals & Software, Inc.

Dr. Term Professional

The most powerful Amiga telecommunications program can handle any on-line eventuality, from Amiga-Mainframe linking to the rarest terminal emulations and protocols. Along with a 300 entry phonebook, the extensive script command language lets you program up to 40 different macros. Extensive pull down menus also allow fully customized terminal configurations. Protocols supported include: YMODEM, WYMODEM, Compuserve B and Kermit. When your need real telecommunications power, call Dr. Term Professional!

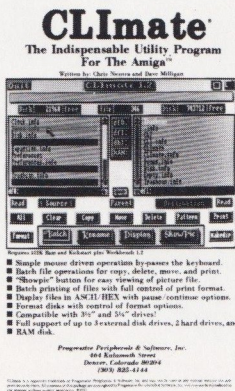

Access-64

Protect your investment in C-64 and C-128 hardware! Now use your Commodore disk drives, printers and other serial peripherals on your Amiga! Access-64 will even transfer C-64/C-128 files to the Amiga. **Not a 64 emulator**, Access-64 comes with software and an adapter plug that fits into your Amiga's serial port. No new commands to learn, since it's completely transparent. Please specify A-1000 or A-500/A-2000 version.

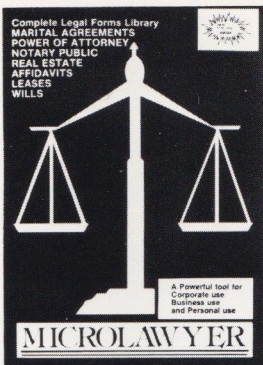

DiskMaster

More than a file management utility, this powerful tool lets you view and manipulate up to 80 files and directories at once—perfect for hard drive management. Copy, move, rename and print files, create directories, and format disks without ever keying AmigaDOS commands into the CLI. Just point and click to ARC and de-ARC files, view IFF pictures, play IFF sound files and more. Configure up to 6 external C: directory commands; print and read text files using the mouse-controlled, reversible file reader. A flexible, powerful utility for Amiga.

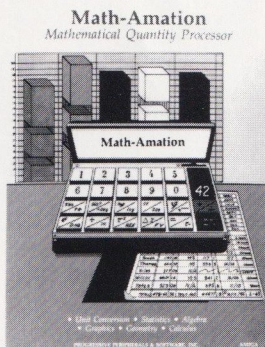

CLimate

A powerful, friendly, file management utility. Use the mouse to by-pass the keyboard for most operations. Lets you copy, delete, move files and directories. View IFF pictures and print files with control of print format. Newest version won't write "Fast.dir" files unless you tell it to! Supports up to 3 external disk drives, 2 hard drives and RAM disks. Plus much more!

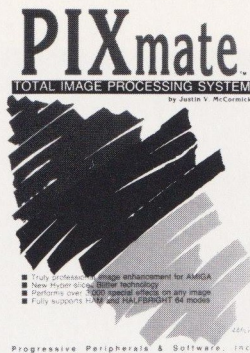

Microlawyer

Save on legal fees! A powerful software tool for corporate, business and personal use. Provides time saving legal templates that act as a starting point for discussions with your lawyer. The legal forms produced will be formatted to allow your lawyer to quickly meet your legal needs. With your favorite word processor and the excellent owner's manual, simply fill in the blanks like a paralegal!

Math-Amation

This colorful, multi-module tool kit is a friendly yet powerful approach to solving any technically oriented problem. Includes scientific and matrix calculators, X-Y arrays, polynomials, statistics, function plots and more. Instant unit conversions to and from over 100 types of measurements: from volume and viscosity to acceleration and area. A business graphics module allows quick presentation of 3-D bar charts, pie charts, and much more.

PIXmate

The perfect graphics companion. PIXmate is high performance Amiga image processing system which performs over 3000 special effects. Using space-age image enhancement techniques developed for NASA, PIXmate converts to and from all Amiga graphics modes and resolutions. Resize and merge images and reduce colors in seconds. Hyper-Slice™ technology accelerates the graphic processing speed of your Amiga by a factor of 10. Features and power found in some \$100,000 dedicated workstations! A valuable addition to any Amiga library!

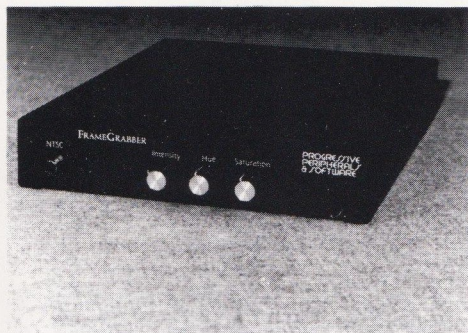

IntroCAD

Powerful, introductory CAD (computer aided design) for all Amigas. Flexible and easy to use: point and click to make lines, boxes, circles and arcs. Includes: adjustable text size, zoom, isometric/-projection gridding, snap-to-grid, clone, size, rotate, sketch, etc. Line thickness and style are also adjustable. Unique printer drivers deliver laser-like output on dot matrix printers. Saves images in Aegis Draw format for import into desktop publishing programs. Excellent for small CAD projects, presentations, flow charts, mechanical drawings, etc.

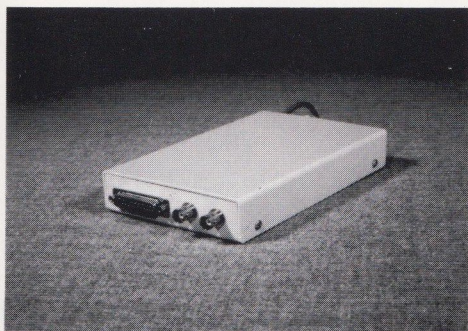

Hardware

Progressive Peripherals & Software, Inc. is currently offering a full line of memory expansion cards, from 512K to 8 MB! We also delivery quality with our real-time color digitizer, FrameGrabber. All of our hardware products are developed for professional installation, operation, and results. If you desire more information concerning any product in this quick reference guide, please contact: Progressive Peripherals & Software, Inc., 464 Kalamath St., Denver, CO USA 80204 Phone: (303) 825-4144.

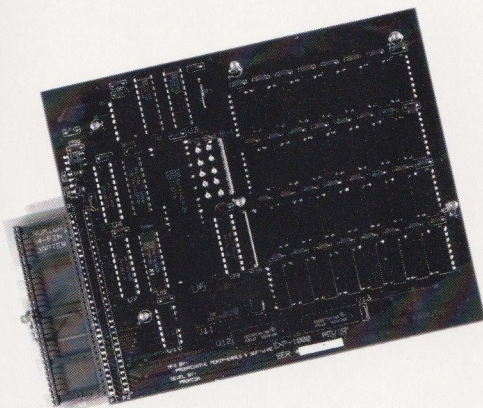

FrameGrabber

This exciting real-time image digitizer grabs 4,096 color HAM images directly from TV-tuner, VCR or Video Camera in just 1/30th second (1/60th second for B & W images) and ports them to any Amiga. The sophisticated image control software delivers time lapse animation in Black & White and Color, multiple exposures, color dithering and more. A unique software-controlled live video switch lets you preview your images before digitizing. Supports all Amiga color modes and screen resolutions ranging from 320 x 200 to 640 x 400--including 384 x 240 Overscan! A true stand alone unit with its own power supply and on-board internal dynamic RAM for storing newly digitized images. FrameGrabber even has external controls for adjusting hue, saturation and intensity. Connects via a parallel port.

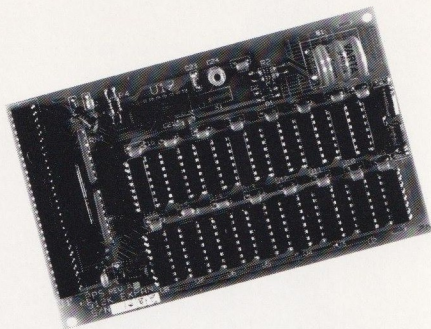

ProGEN

Parallel chromatic processing and leading-edge technology make ProGEN ideal for a wide range of professional genlock applications. Designed for use with any Amiga, delivering clean NTSC color output. Includes custom software giving you keyboard control of up to 5 video modes. Broadcast-quality output meets RS-170A standards. Cables required.

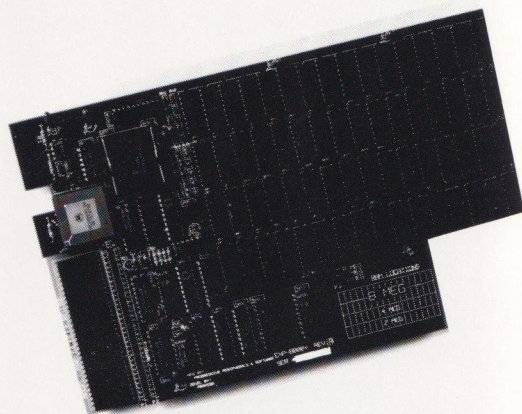

EXP-1000

Patented 1 MB **internal** RAM memory board for the Amiga 500. Its unique design is fully auto-configuring. Full compatibility with 512K expansion boards, like EXP-512 or A-501, gives up to 2 MBs of Fast RAM. Clean, professional attachment to the A-500 motherboard; no cutting, no soldering, no jumpers. Available with or without RAM installed.

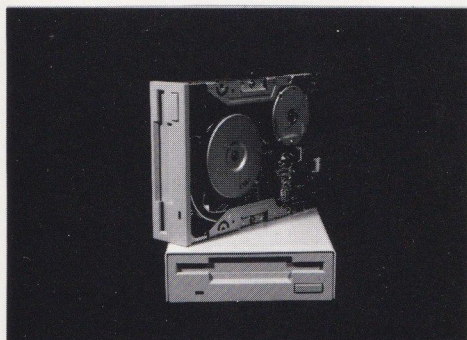

EXP-512

Upgrade your A-500 to 1 MB of RAM internally with this convenient, battery-backed clock/calendar, totally transparency board. Concise instructions make for easy installation in the expansion slot of your A-500. Clean, efficient design and compatibility with the EXP-1000 and EXP-8000+ make the EXP-512 the perfect memory investment. Available unpopulated.

EXP-8000+

Add a whopping 8 Megabytes of RAM to your Amiga 500! Engineered for easy internal installation, the EXP-8000+ uses a unique, patented design. User-upgradable to 2, 4 or 8 MBs. There's even a socket for a 68010 processor or 68881 math co-processor. Fully compatible with 512K RAM expansion boards like the A-501 and EXP-512, the EXP-8000+ can upgrade your A-500 to 9 Megabytes!

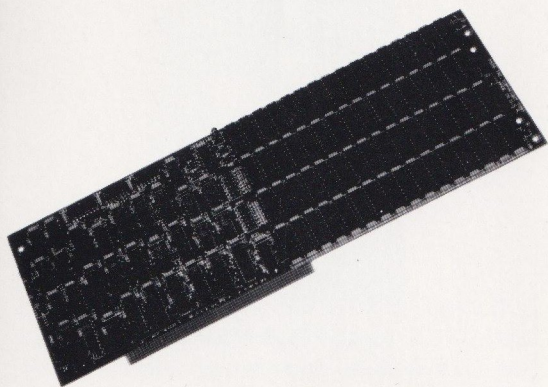

ProDrive

The mightiest little disk drive around, an external 3.5" drive built to last. Its solid, all-metal construction ensures long, reliable operation, while a spring-loaded door keeps dust away from internal components. Includes a 27" cable for convenient placement, cooler and quieter than the A-1010. ProDrive works with all Amigas.

ProDrive 2000

Now the quality and extra features of ProDrive, for the 3.5" internal drive of the Amiga 2000. Complete mounting hardware and instruction manual make installation a snap. The finest 3.5" internal disk drives available for the Amiga 2000.

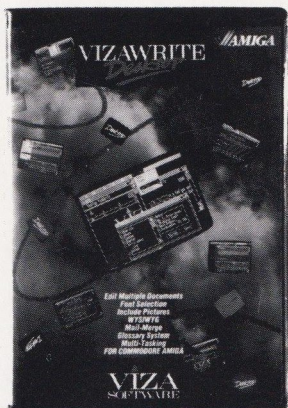

ProRAM 2000

An affordable 8 MB internal RAM expansion board for the A-2000. Power to spare for memory-intensive programs. User-upgradable in economical 2-Meg increments; fully autoconfiguring to 2, 4, 6 or 8 Megabytes. Uses affordable 1 MB DRAM chips. Available unpopulated.

Software

Progressive Peripherals & Software, Inc. is developing and marketing numerous professional productivity programs. Our goal is to create business applications which allow you to harness the power of your Amiga computer. For more information about our software, please contact: Progressive Peripherals & Software, Inc., 464 Kalamath St., Denver, CO USA 80204, Phone: (303) 825-4144.

VizaWrite Desktop

The latest version of this popular program has powerful word processing with some desktop publishing features. VizaWrite Desktop V1.09 is a complete WYSIWYG package, with fast mailmerge, headers & footers, document history and more. Import pictures from your favorite paint program, resize at any time and print! Open multiple document windows, search and replace, etc. Supports proportional and fixed-width fonts, giving instant pixel accuracy to margins, tabs and justification. Ruler lines, margins tabs, justification and line spacing are all mouse-driven. High quality 24-pin printer support; works with all Amigas.
